Step 1.1: Choose user flow

For this assignment, my user flow will be searching PC parts and adding a part to the cart.

1. The user views a list of PC parts, like CPU's, GPU's, RAM, etc.
2. The user searches by name, category, or price
3. The user selects a part and adds it to their cart. The interface would then update to show the new selection and total.

Step 1.2: Input Mechanics

Input Method	How it works on our page
Mouse	Click search, filters, sort, and "Add Parts" button
Touchscreen	Tap controls with targets at least 44 x 44 px.
Keyboard	Tab through controls, type into search, activate buttons with Enter or Space
Screen reader	Read descriptive product names, form labels, selected filters, and cart update information

Step 1.3: Requirements

Component	Behavior
Search field	Filters products based on the entered text
Category filter	Shows only the selected type of PC part
Sort dropdown	Sorts products by price or name
Product card	Shows product name, price, and description
Add Part button	Adds the selected product and updates the build total
Cart summary	Shows selected parts and the current total
Status message	Announces results, errors, and successful additions

Step 1.4: Plan interactions

State	Example
Default	Product card and button displayed
Hover	Product card or button changes appearance when pointed at
Focus	A visible outline shows which element is selected by the keyboard
Active	Button changes appearance when pressed
Disabled	Add Part is unavailable when the action cannot be complete
Loading	A brief processing indicator appears while the product list updates
Error	A helpful message appears if an operation fails or has no results
Success	The page confirms that the part was added and updates the total
